## **Advansor by Hillphoenix CO<sub>2</sub> Booster Refrigeration Systems Receive UL Listing**

*HFC-free CO<sub>2</sub> transcritical refrigeration by Hillphoenix is now available in North America.*

ATLANTA – Hillphoenix Inc., a Dover Company, is pleased to announce that its Advansor by Hillphoenix CO<sub>2</sub> Booster Refrigeration System has received UL listing in both the United States and Canada. With this new designation, HFC-free CO<sub>2</sub> transcritical refrigeration by Hillphoenix is now available to customers in North America.

Dover acquired Denmark-based Advansor A/S in November 2011. The Danish company specializes in the design and manufacture of HFC-free CO<sub>2</sub> transcritical refrigeration and heat pump systems for supermarkets and light industrial applications. Advansor and Hillphoenix combined have more than 750 CO<sub>2</sub> systems operating in supermarkets in the United States, Europe, Canada and South America, making them the largest manufacturer of CO<sub>2</sub> refrigeration systems in the world.

Advansor by Hillphoenix CO<sub>2</sub> booster refrigeration systems are compliant with the Machinery and Pressure Equipment Directive – MD (06/42/EC) and PED (97/23/EC) – and are CE marked in accordance with rules of the European Union. Hillphoenix can now add the UL mark to its extensive list of European and U.S. designations.

“Hillphoenix is pleased to be the first manufacturer of UL Listed CO<sub>2</sub> booster systems North America. The UL listing is an important step forward in our efforts

to bring innovative, sustainable HFC-free refrigeration systems to the North American market,” said Scott Martin, director, sustainable technologies for Hillphoenix. “With UL Listing, we can begin fulfilling orders from our U.S. supermarket customers and support their efforts in the transition to HFC-free refrigeration.”

Since 1894, the mission of UL (Underwriters Laboratories) has been "working for a safer world," which is at the core of everything the company does. Through its network of nearly 9,000 employees and more than 200 laboratories and inspection centers, UL advances safety through careful research and investigation, helps prevent or reduce loss of life and property, and promotes safe living and working environments for all people.
